# Specification Status

> ***NOTE*: We have migrated our specification development tracking to *Jira*. The new *All Specifications Under Development* replaces the old table-based, static page. Please see the *"Historical Status"* section for legacy information.**

## New Information

These links provide more information about specifications currently under development:

- "RISC-V Specification Status" wiki page - a general overview of all specification status. **** Start here if you are just perusing information. ****
- "All Specifications Under Development" wiki page - a table-based representation of all specification status
- "RISC-V Specifications for Chairs" Kanban board - a more detailed view of Jira cards (Jira login required via LF id. See *Getting Started Guide* section on "Linux Foundation Tools" for more information.)

Any questions or problems should be sent to help@riscv.org or reported at help.riscv.org (GH issue repo which requires authorization and authentication).

## Historical Status

The historical specification status, including the information know as the "Specification Dashboard" has been moved to the "Specification Status - Historical" page. Please reference it for legacy information.
