Libraries

This page gives an overview of upstream projects. If you miss information or find mistakes, please edit.

- gperftools
- jemalloc
- OpenSSL

---

gperftools

gperftools provides a heap library (tcmalloc) optimized for multi-threaded applications and a heap-profiler.

- gperftools Homepage
- gperftools git repository

---

jemalloc

jemalloc a heap library optimized for performance.

- jemalloc Homepage
- jemalloc git repository

OpenSSL

OpenSSL is a cryptographic library, which brings its own implementation of the TLS protocol. Additionally, it also includes an implementation of cryptographic algorithms (symmetric ciphers, asymmetric ciphers, hash digests, key derivation, etc.).
